

Designed to monitor.

First measure, then optimize: Fronius Smart Meter

Visualize, control, and optimize energy flows: efficient energy management is only possible if the right data is available. And this is exactly what the Smart Meter – our bidirectional and intelligent electricity meter for photovoltaic systems – quickly, reliably, and accurately provides.

Fronius Smart Meter. Designed to monitor.

01 Data with added value

The basis for photovoltaic system optimization: our bidirectional Smart Meters measure all energy flows that come from the grid or flow into the grid, allowing them to gather valuable information quickly, reliably, and precisely. When used properly, the data has the real added value of money savings for photovoltaic system owners.

02 Savings included

Save money and energy over the long term: this is made possible by our Smart Meters as essential accessories in combination with the inverter and Fronius Solar.web, our online monitoring tool. Energy flows can be visualized, controlled, and therefore also optimized. This is how efficient energy management based on data works.

03 Ready for anything

Something for everyone: our variety of Smart Meter products covers the entire range of applications – whether for residential or commercial use.

Current transformers for Fronius Smart Meters

Flexible measurements

Risk-free photovoltaic optimization: In large PV systems, high output current can no longer be recorded with Smart Meters that measure directly. The Fronius Smart Meter CT current transformer alters the current into a signal that is reliably measured and converted. Installing the Fronius Smart Meter CT is especially convenient. Thanks to the split-core technology, the current transformer can be placed around the conductor without having to disconnect the cable for installation.
